

# Modular Endless Entry System and Sun-Ledge

- This sun ledge installation has the entire sun ledge excavated revealing the PVC pipe used to level the steps at the end of the pool.

- Receptors are factory installed under the steps to receive the pipe.
- Concrete footing is poured to secure the pipe and steps in place.
- The steps are also your back wall; as no steel is required.

- Same installation procedure is used for the steps that lead from the ledge into the shallow end.
- Patented fluted rod liner receiver on every top tread. Faster method vs than liner bead receiver.

**Note:** the sun ledge area only needs to be excavated 22" deep. ALPSMfg will supply 22" steel walls and bracing for the side walls and ship a complete sun ledge kit including all bracing.

# Vinyl Over **Endless Step**

- Closed top step parts arrive as 4' or 2' sections.
- Easily and quickly bolt together to any length.
- Solid as poured concrete
- Receptors are factory installed under the steps to receive PVC pipe supports.
- Concrete footing is poured to secure the pipe and steps in place.
- The steps are also your back wall; as no steel is required.
- Corners are square. Radius PVC 6" inserts, 5" foam corners or 5" steel diagonals can be added if desired; but not necessary.

## Patented fluted rod liner receiver
